The Opportunity: Seed Investment

Investment Round

Seed round

Target Valuation

€2.5M (6-month horizon)

Use of Funds

- Product acceleration
- Market expansion
- Team growth

> Join us in building the financial OS of the green transition.

> We're not building a tool. We're building the OS of green finance.

Founder expertise combines:

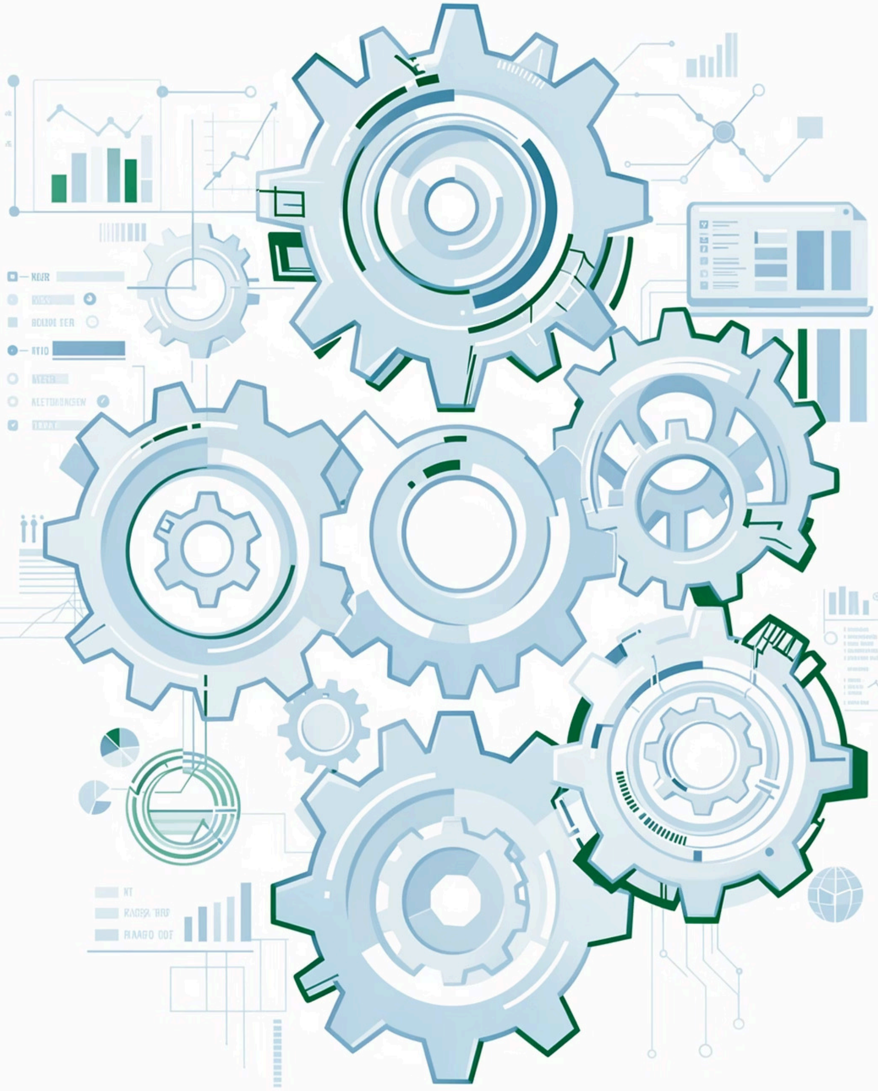
Deep technical architecture

- Strategy Pattern
- Data systems

Fiscal mastery

- ICC/IRC optimization
- Subsidy law

This rare combination is our unfair advantage.



Lean by Design: SARL-S at €1

Burn rate

< €150/month

Structure

SARL-S (Luxembourg startup vehicle)

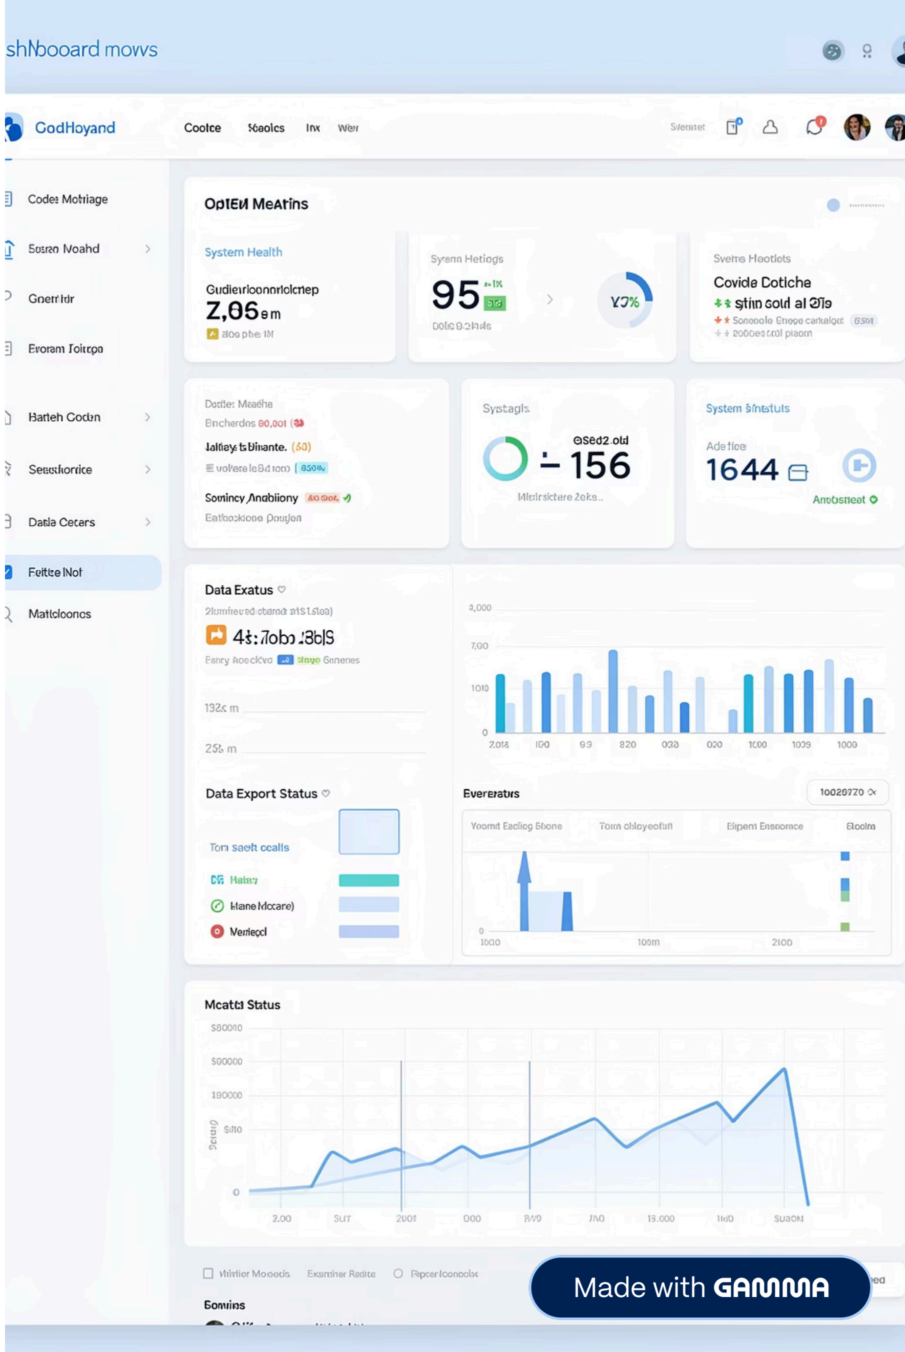
Agility

Pivot-ready with zero overhead

> We're not burning capital. We're building capital efficiency.

Technical Traction: Already Built

- 1,365 lines of production code
- Live monitoring and alerting system
- JSONL export ready for AI/ML pipelines
- Admin dashboard with real-time metrics



180 Days to Pre-Seed

Our strategic roadmap outlines key milestones to achieve our pre-seed funding target within the next six months.

Day 30

Alpha Fiduciary Launch (first paying customer)

1

Day 90

Freemium Platform Live (market validation)

2

Day 180

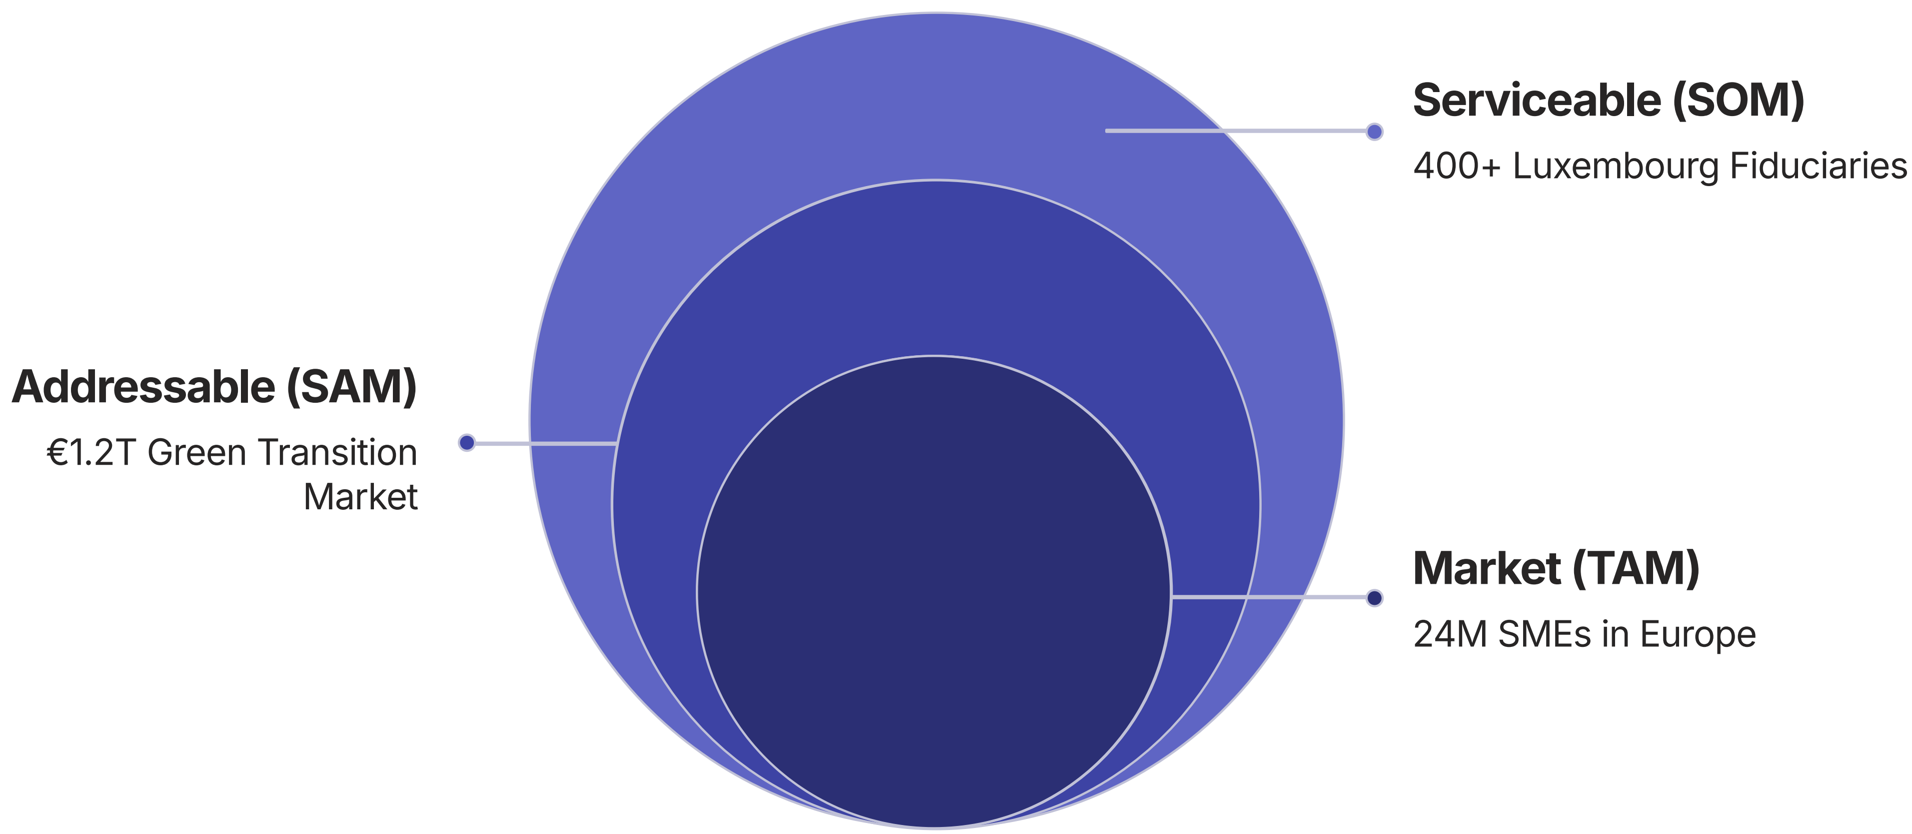
Pre-Seed Fundraise (€2.5M target)

3

TAM/SAM/SOM: A €2.4 Trillion Opportunity

Understanding the full scope of our market opportunity is crucial for strategic planning and growth. We have identified a significant addressable market across Europe, with a focused initial target.

TAM: 24 million SMEs across Europe
SAM: €1.2T green transition market (2026-2030)
SOM: 400+ fiduciaries in Luxembourg (initial beachhead)



This visualization illustrates our market strategy, moving from the broad Total Addressable Market (TAM) to the more specific Serviceable Available Market (SAM), and finally to our initial Serviceable Obtainable Market (SOM) in Luxembourg, highlighting a clear path for market penetration and expansion.

INNOVATION - The CO2 Marketplace: Closing the Loop

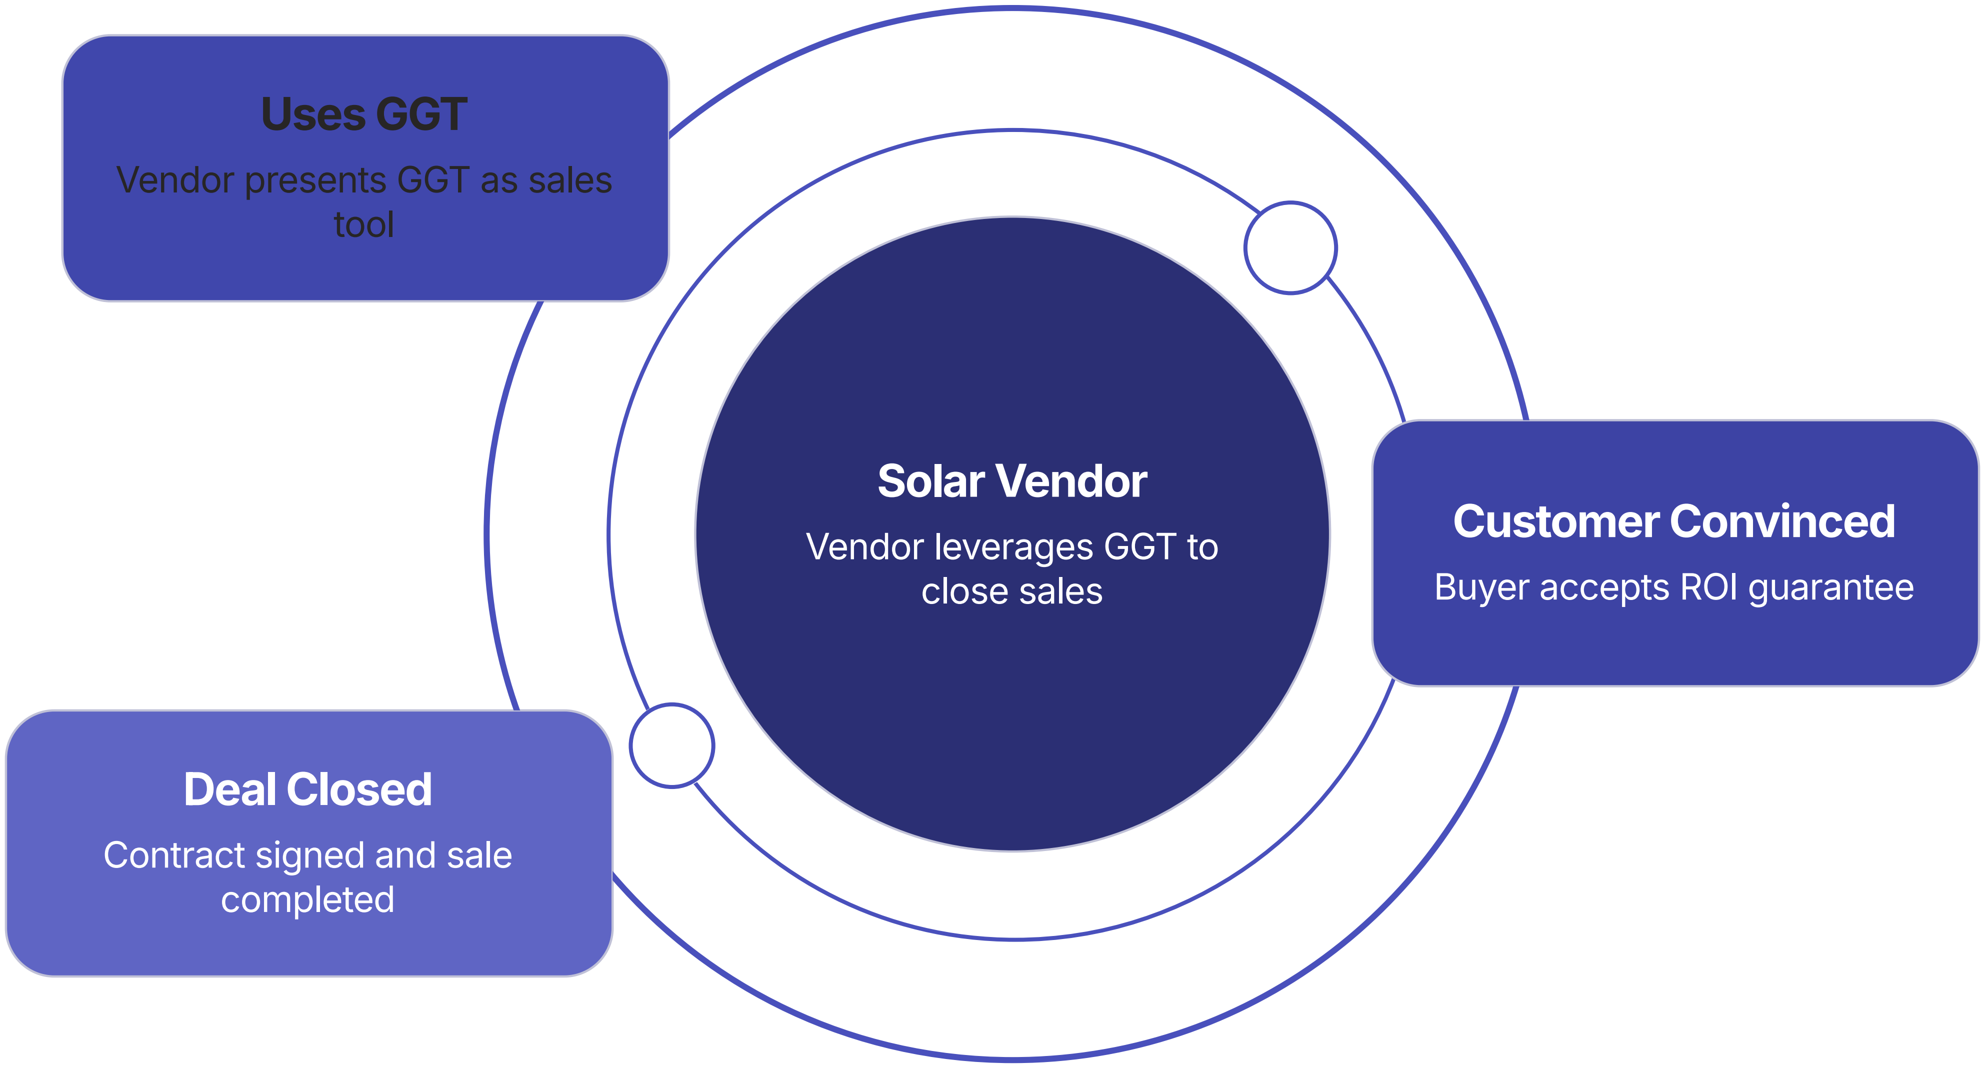
Residual carbon credits meet local impact.

Companies reinvest their fiscal gains into certified Luxembourg NGO projects. We transform tax optimization into measurable environmental impact.

The Trojan Horse: Vendor Partnerships

> We don't hunt customers. The vendor brings them to close the sale.

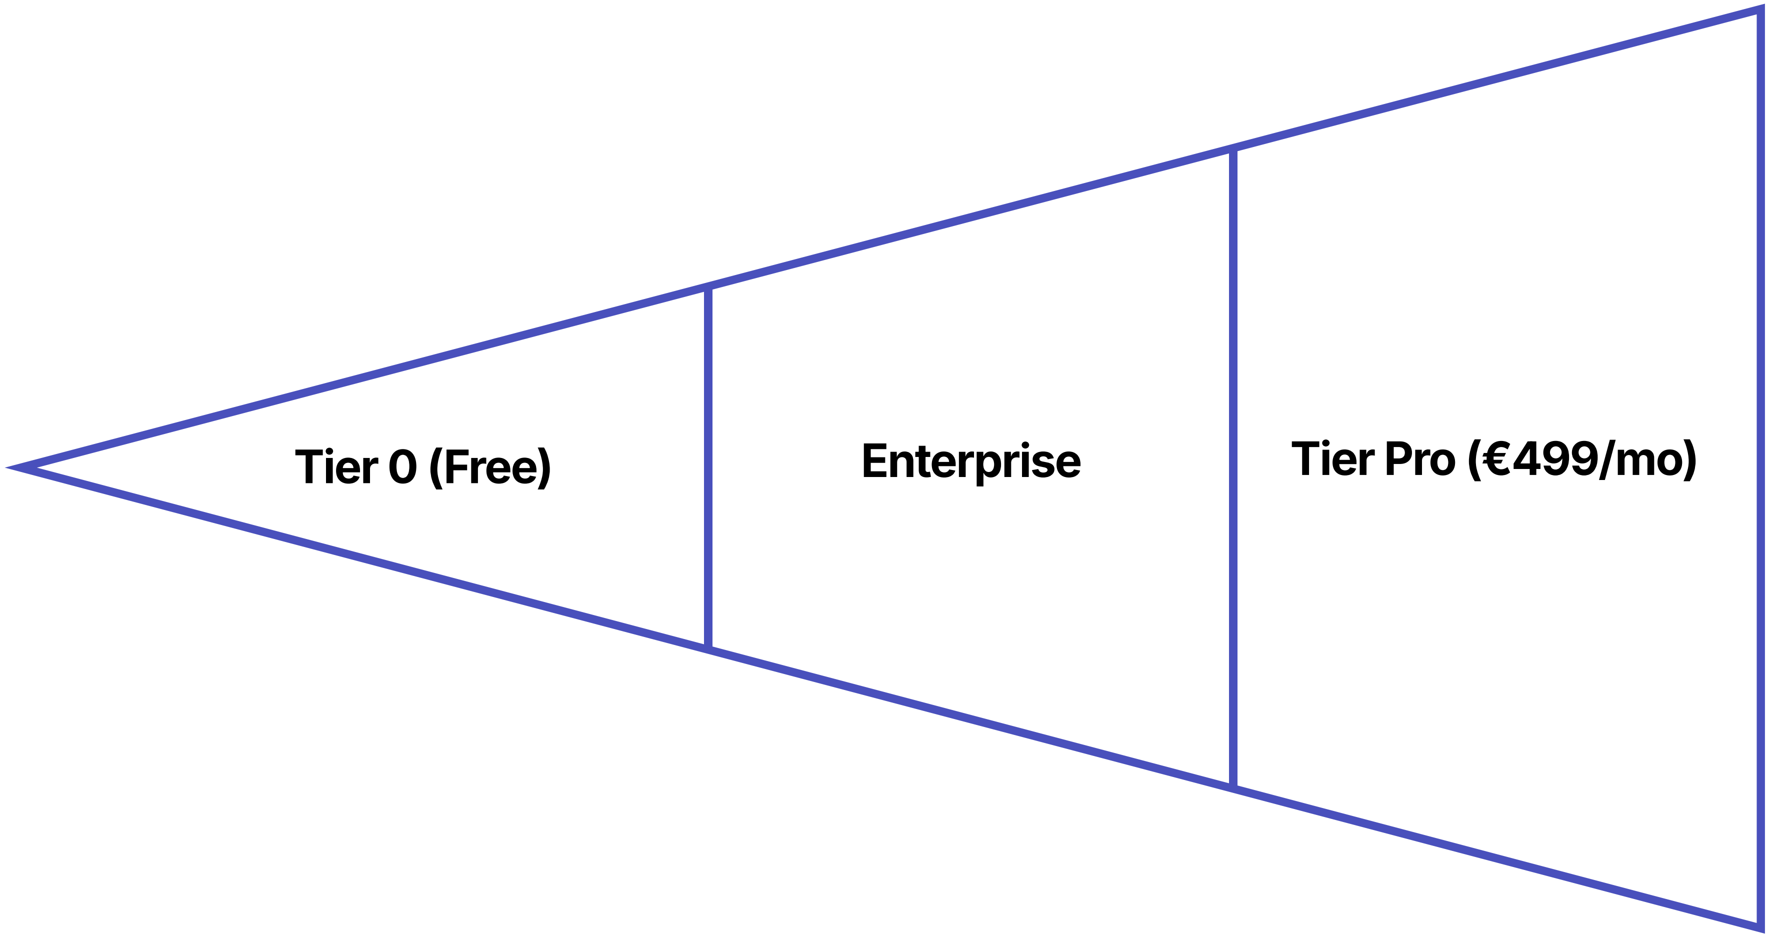
Solar panel vendors, HVAC installers, and energy consultants use GGT as their closing argument. "Here's your ROI guarantee." Deal closed.



This diagram illustrates how GGT integrates seamlessly into the vendor sales process, acting as a powerful tool to drive customer conviction and secure deals.

The Flywheel: Three-Tier Monetization

Our business model leverages a tiered approach to monetization, offering value at different levels to a broad spectrum of users, from free access for market intelligence to premium services for fiduciaries and high-value enterprise deals.



This funnel visualization demonstrates how users progress through our offerings, starting with free access and escalating to specialized paid services and high-value enterprise partnerships.

PROOF POINT

Case Study: The Contern SME

Without GGT

Investment: **€500k** in green infrastructure

Net Gain: **minimal returns**

Without the optimization provided by GGT, the investment in green infrastructure yields limited financial benefits beyond the direct project implementation.

With GGT

Investment: **€500k** in green infrastructure

Net Gain with GGT: **€166k** (subsidies + ICC/IRC optimization)

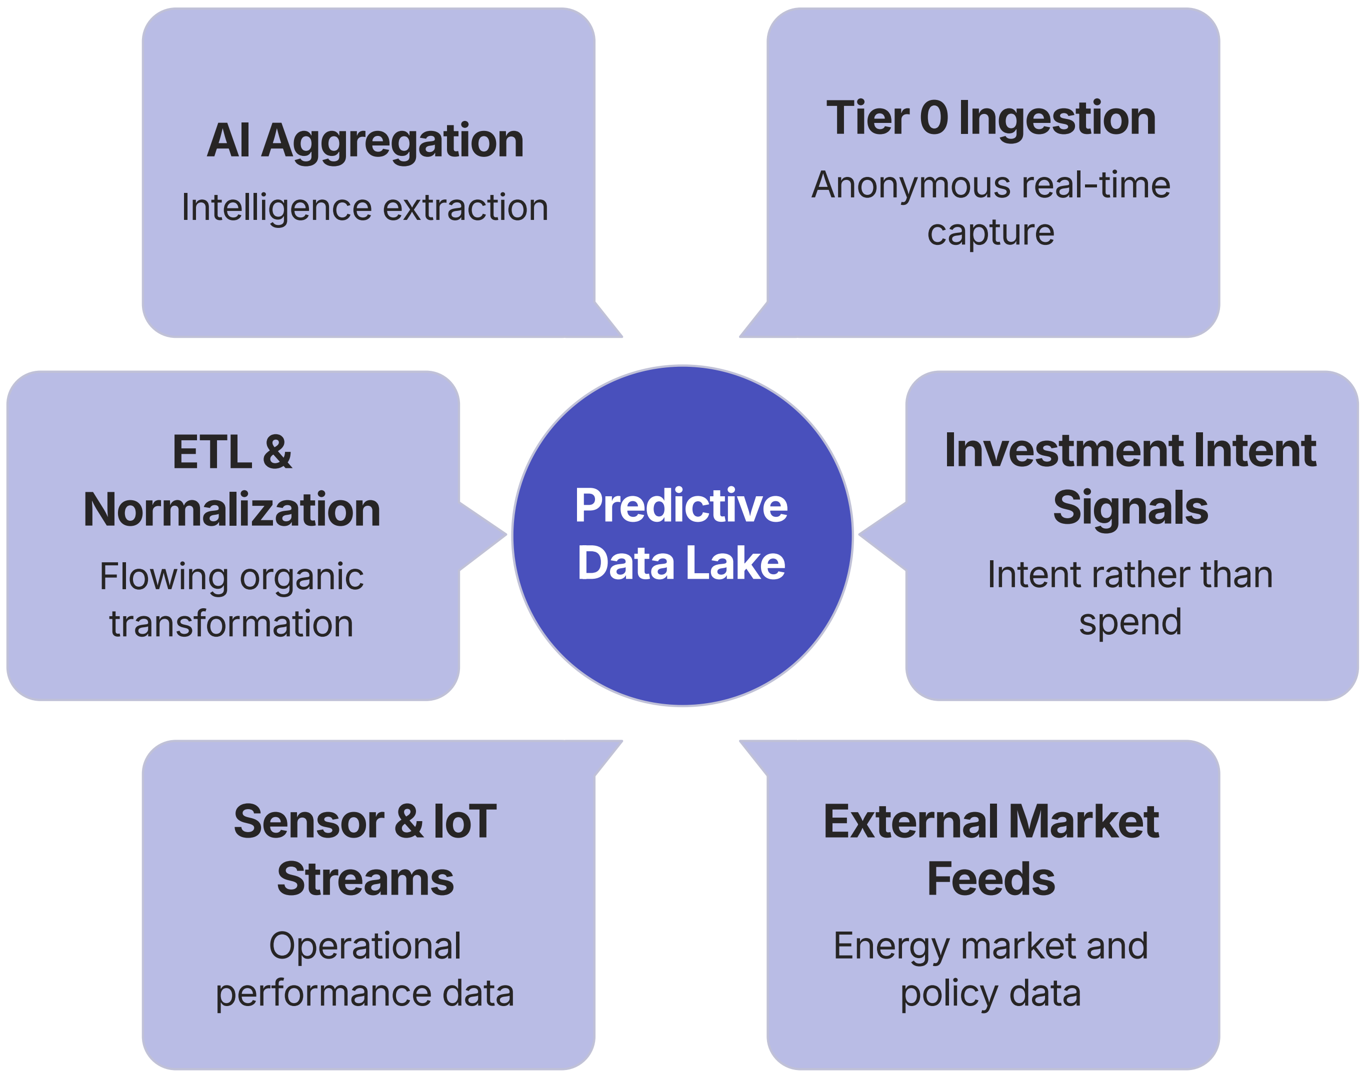
ROI: **330x** our annual subscription cost

By leveraging GGT, the same investment is significantly amplified through optimized subsidies and improved tax credits, delivering a substantial return on investment.

The Data Model: Investment Intent, Not Expense Tracking

We don't track spending. We capture investment intention in real-time.

Our Tier 0 anonymized data ingestion creates the first predictive data lake for green energy transitions in Europe. This is our competitive moat.

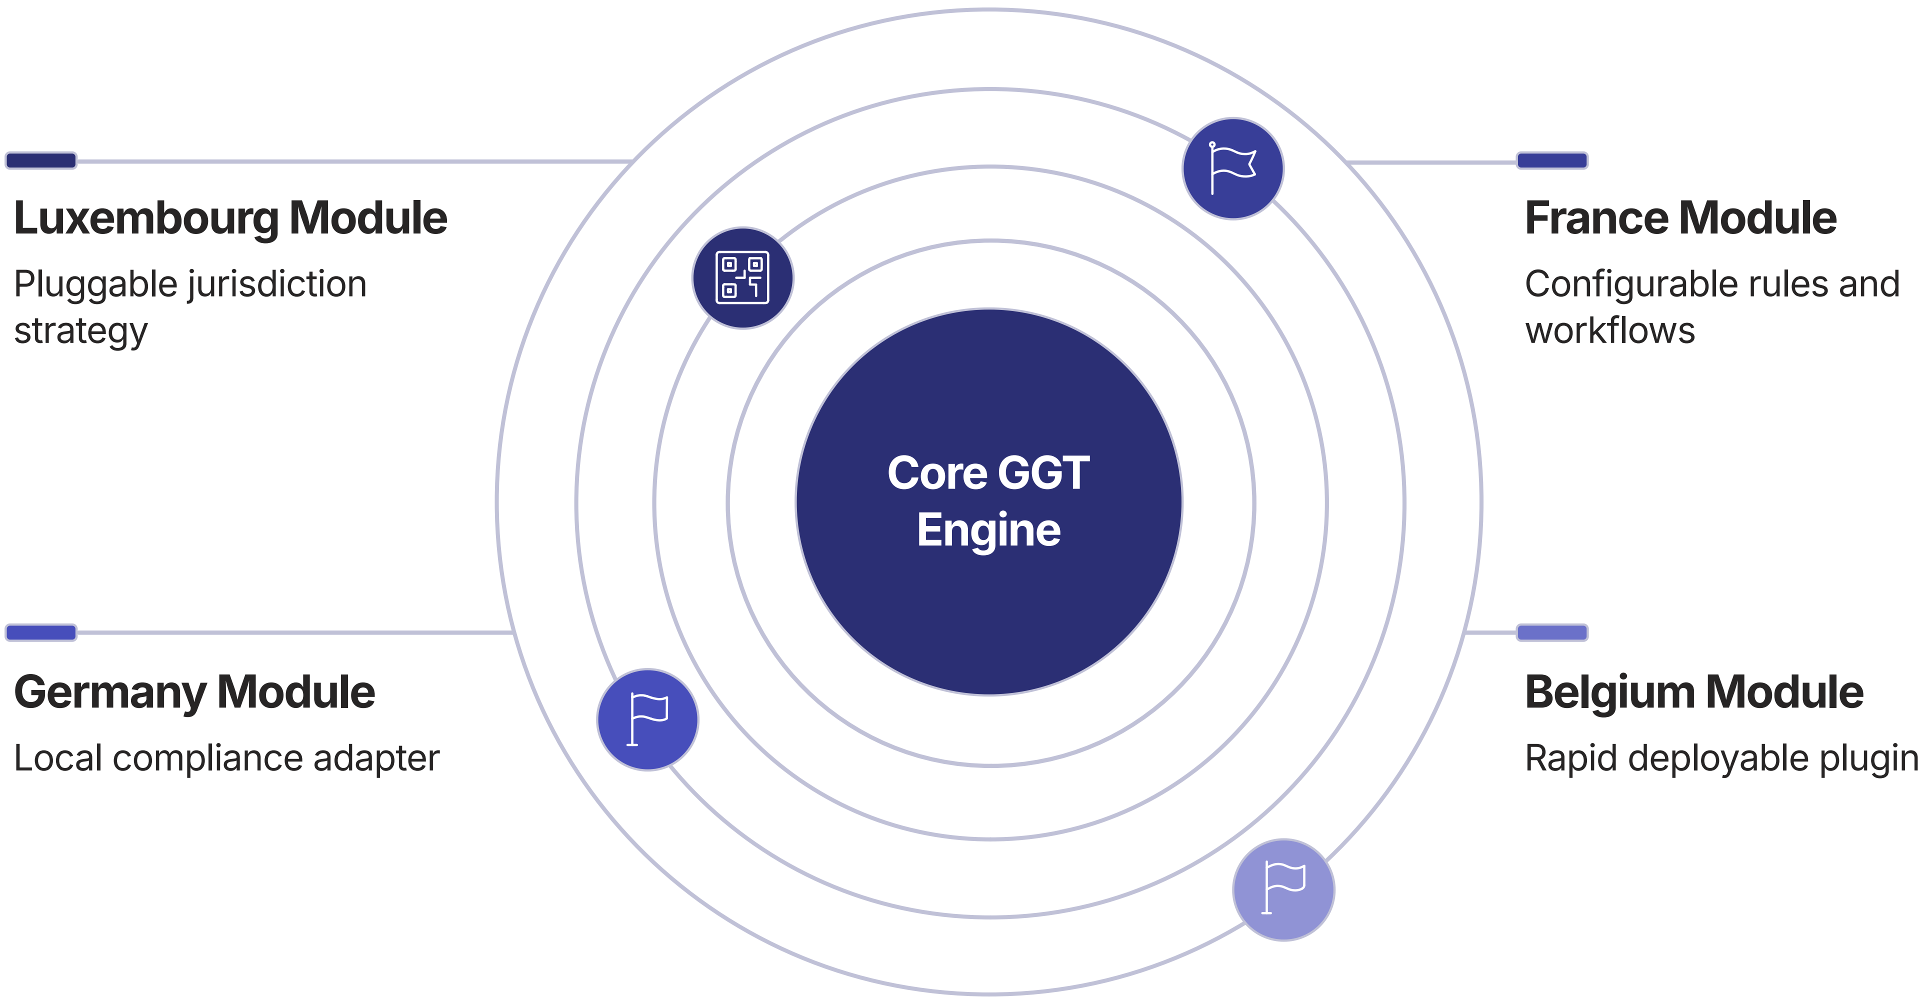


This visualization illustrates how diverse data sources are harmonized into our predictive data lake, enabling superior intelligence and foresight for green energy transitions.

The Engine: Strategy Pattern Architecture

Code-agnostic. Add a new jurisdiction in < 2 hours.

GGT's modular architecture manages 6 European jurisdictions with a single codebase. Each country is a pluggable strategy module. Scalability by design.



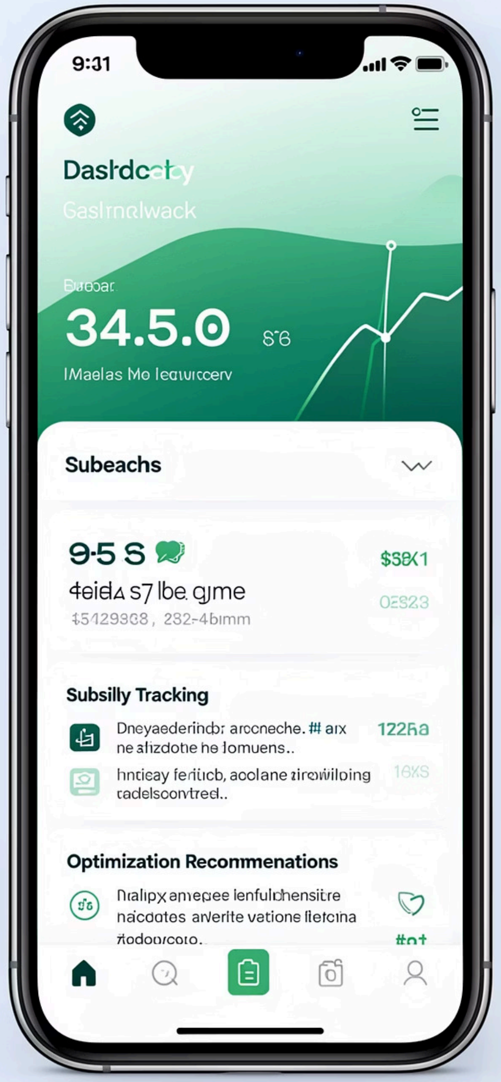
This diagram illustrates the pluggable strategy pattern, enabling rapid expansion into new European jurisdictions while maintaining a single, scalable codebase for the GGT Engine.

GGT: The Fiscal Architect

From Technical Specs to Immediate Cash Flow

GGT is a Green-FinTech that transforms complex subsidy applications into instant liquidity. One dashboard. Real-time optimization. Zero friction.

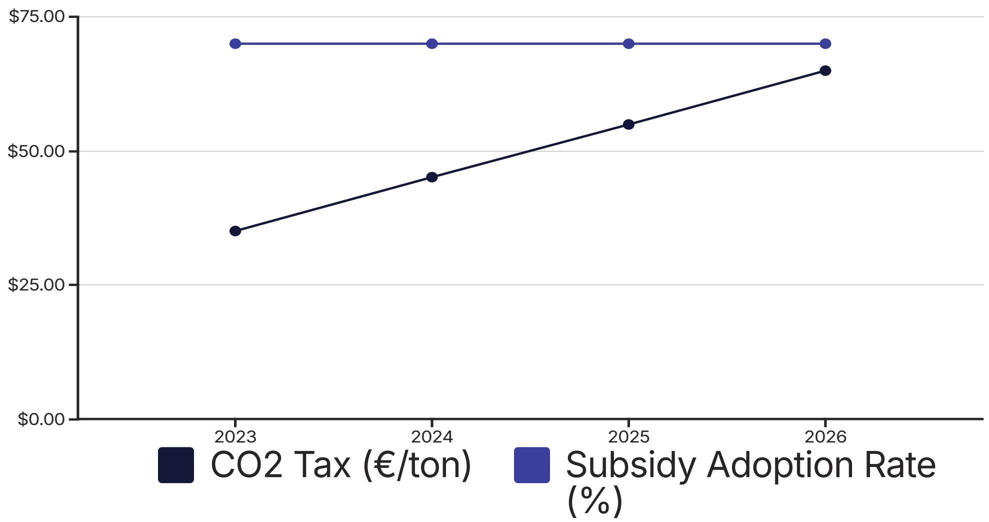
Dashwoware



The €65 Trillion Gap

Key stat: **30% of green subsidies go unclaimed annually**

In 2026, the EU carbon tax hits €65/ton. Yet 30% of available green subsidies remain unclaimed due to fiscal complexity and advisory costs. This creates a massive friction point for SMEs trying to decarbonize.



This chart illustrates the growing financial pressure on businesses as the EU carbon tax steeply rises from €35/ton in 2023 to €65/ton in 2026. Concurrently, the green subsidy adoption rate remains stagnant at 70%, highlighting the missed opportunities for SMEs to offset these increasing costs. The diverging trends underscore the "€65 Trillion Gap" caused by unclaimed subsidies amidst rising environmental levies.

GGT: The Alpha of Green Finance

Maximizing Net Liquidity in Decarbonization
